BITCARAT

BitCarat is a blockchain-powered set of facilities that comprise the foundation for the brighter future of diamond markets; the future where liquidity and price efficiency are not abstract textbook definitions with no relevance for the diamond industry, but, instead, are its immanent features with direct implications for both, the present mechanics and future evolution.

THE TOKENS

The **BTK** token powers the mechanics of the network

The **TXD** token is a stable-coin solving the fungibility problem, backed by physical diamonds stored and secured readily deliverable

The **BTK** token is available during the **ICO** and the diamonds equivalent **TXD** is given as a reward for early participation

CURRENTLY AVAILABLE

Bleeding edge modular low-latency exchange technology for spot trading

Machine learning-based algorithm for pricing diamonds

Physical depository: a secure vault allowing for safe storage of diamonds

OUR ASPIRATIONS

DPOS Consensus protocol and two coins that underpin a custom blockchain

Similarly advanced platform allowing for trading in derivatives

Digital diamond bank: a regulated institution that can take deposits, give loans and invest
